Case Study:

Fionia Bank - Automating the Build Process Teamstudio® Build Manager

Client Overview

Fionia Bank is one of Denmark's largest banks with 84,000 residential and 7,500 commercial customers. With over 600 employees across Funen, the Triangle Region and Copenhagen.

The Challenge

In order to meet required standards set by the Danish Finance Auditors Finanstilsynet, Fionia Bank had to ensure their development environment was separate from the production environment. The risks of errors in production are greatly reduced as a result of this separation.

After searching online for a way around this challenge, it was then that the team thought of Teamstudio® Build Manager. Build Manager is a build automation system that provides a framework for organizing, managing and automating the build process so that builds are consistent, efficient and secure. After finding such a perfect solution, the team did not need to consider any other options.

Fionia Bank's development team knew they had a business case for Teamstudio Build Manager. Once they understood how difficult it would be to separate their environments manually, they recognized undertaking such a big project without Build Manager would not only allow for human error, but the time taken to deploy applications would be far greater. It was also clear to Fionia Bank that segregation of duties would be difficult to define without Build Manager.

The Teamstudio Solution

Simon Peek of Teamstudio met with the team, gathered their requirements, and implemented the system. The installation process was very smooth, and Build Manager integrated fully with the other Teamstudio tools (CIAO!® and Configurator) Fionia Bank already had in their development repertoire. Once installed, the team completed their Build Manager training within a few days. After that, the few questions they had were answered via Teamstudio's standard support provided as part of the Build Manager service.

The Result

Before Fionia Bank acquired Build Manager, changing applications required tedious manual updates. With almost 80 databases and a large number of mission critical applications, it is clear just how time consuming this would have been for the development team at Fionia Bank. They would have to resort to manually performing such actions as copying databases, setting ACL templates and inheritance parameters, recompiling LotusScript®, and signing databases, before promoting their designs to the next environment. With Teamstudio Build Manager, one click promotions were made possible.

Case Study: Fionia Bank - Automating the Build Process Teamstudio® Build Manager

"Being able to carry out one-click promotions without the risk of human error was definitely the main advantage for us internally. It enabled the most technical people to help configure the software, and once this was complete the less technical people were able to carry out promotions without the help of others due to the full automation", said Klaus Terman, a developer at Fionia Bank. "Build Manager is a fantastic product. Not only is it easy to use but it is a huge help for the team. We haven't had any problems using the tool, and now receive a consistent and reliable result with each build process."

Klaus Terman goes on to state the results since implementing Build Manager: "We have saved time and money due to the increased efficiencies that Build Manager introduced. It has enabled us to achieve compliance and therefore has taken a major role in supporting our business".
