Teamstudio® Usage Monitor

Application usage monitor

- > Tracks application usage throughout the Notes®/Domino® infrastructure
- > Filters and analyzes data; produces clear, actionable reports
- > Monitors both high-level and field-level application activity
- > Provides detailed audit histories of mission-critical applications
- > Helps you identify the dead wood

Organizations change. They expand, contract, merge, divide, and restructure. In a perfect world, their Notes®/Domino® infrastructure reconfigures accordingly, but too often the result is abandoned applications, forgotten databases, and redundant replicas.

Teamstudio® Usage Monitor can prevent the infrastructure bloat and wasted resources that result from habitual neglect of an ever-changing Notes/Domino platform. Usage Monitor is a server-based tool that tracks and analyzes application activity at a granular level to reveal who is using what—and what isn't being used at all. The activity is stored in either the Usage Monitor log or the database-level log for later analysis.

The more you know, the safer you are

Usage Monitor's ability to capture every interaction—whether through agents, the Web, or the Notes client—makes it an expert witness in the event of an audit. Need to know who has read or updated a mission-critical application? Usage Monitor can testify with absolute certainty—information that is far more reliable than what you would come up with by scouring a database looking for the “Last Modified” date.

Usage Monitor works in real time, so you can track the activity of a user while they read/edit/delete documents in any database. And if you have better things to do than sit and watch, Usage Monitor can be easily configured to send email alerts when specific events occur.

To help you make sense of the detailed logs the program collects, Usage Monitor features a variety of views that let you sort and filter the information in the way that provides you with the immediate intelligence you seek.

Track and analyze application activity at a granular level with Usage Monitor
