## Teamstudio® Asset Analysis

*A thorough assessment of the entire Notes application environment*

- › Documents potential upgrade issues
- › Identifies obsolete domain names stored in applications and domain IDs
- › Details all hard-coded server, path names, and IP addresses
- › Identifies areas in applications that fall short of IT objectives

Lotus Notes applications keep your business humming along. The Notes application infrastructure ensures coherence within your organization, no matter how distributed or far-flung. But because of its very pervasiveness, undertaking significant changes to the Notes application infrastructure can be a daunting task. Critical details that must be corrected or updated might lie hidden away, deep within your application designs. Tracking down these details is time-consuming, error-prone work, especially if you're grappling with more than a few dozen applications.

Teamstudio can help you cut to the chase. Our Asset Analysis service provides an accurate, detailed picture of asset usage and application designs, so you can pursue critical initiatives with confidence.

Teamstudio Asset Analysis is typically geared to one of four different objectives:

### Merger and Acquisition Analysis

Merger and Acquisition Analysis analyzes your applications and produces a detailed report identifying branding and infrastructure changes, enabling you to merge Notes/Domino domains efficiently and in a controlled fashion. We'll identify every instance of an obsolete domain name, and flag instances of corporate branding that will need to be updated.

### Pre-Upgrade Analysis

We use powerful usage analysis and filtering technology to identify and eliminate redundant applications and perform a pre-upgrade application screening in order to minimize the costs and complexities associated with upgrades. We'll root out potential upgrade issues like hard-coded file names, email addresses, and IP addresses.

### Security Audit

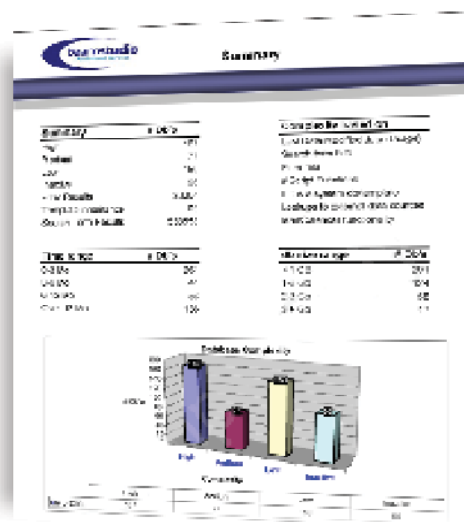

Teamstudio Security Audit combines advanced analysis software with complex filtering and cross-referencing algorithms to generate a comprehensive picture of your existing application security configuration. Our consultants will use the results to provide a detailed, action-oriented application configuration audit report, empowering you with the insight and advice you need to bring your Notes/Domino application security under control.

### Domain and Server Consolidation Analysis

As you regain control of your Notes application inventories, you can also benefit from the added cost savings of consolidating remaining applications onto fewer domains and servers. The domain and server consolidation audit will identify all hard-coded server and path names and highlight the additional information you'll want to have in order to make an informed decision about a potential consolidation project.
